Summary:

Economist who works in the areas of agriculture, natural resources, and the environment. My focus has been on developing interventions that support inclusive and sustainable economic development. As a result-driven person, I'm seeking my work to have an impact.

Skills:

- R (tidyverse, janitor, gt, patchwork, apollo)
 - Python (Pandas, NumPy, Matplotlib) (Transiting from R)
 - Excel (VLookup, Conditional Formatting, Pivot Tables)
 - Qualtrics (survey development, Blocking, Randomization)
 - Cost-benefit analysis (RoI, B/C ratio, NPV, Montecarlo simulation)
-

Work Experience

Coastal value project, UWA

Quantitative researcher, 2023 – Present

Lead coastal value project to work with stakeholders to identifying policy interventions which increase resilience of coastal communities in the face of coastal hazards.

- Collaborated with Busselton local councils and coastal management experts to design discrete choice experiments, ensuring project outcomes aligned with stakeholder expectations and supported evidence-based decisions.
- Developed and implemented a coastal community survey optimised for statistical efficiency to elicit community preferences for coastal management policies.
- Analysed discrete choice experiment survey data using R to estimate willingness to pay and applied latent class models to segment beach users, providing actionable insights for setting coastal levy rates and improving policy acceptance.

Coffee iLandscape project funded by United Nations, CIAT

Quantitative Economist, 2022-2023

- Engaged with stakeholders (Communes in Centre Highlands of Vietnam, international experts) for inputs to design and implemented the coffee value chain survey and presented the results to stakeholders for actionable recommendations.
- Developed and implemented a coffee value chain survey to assess the farm profitability under different intervention scenarios.
- Analysed best-worst scaling experiments data to prioritise interventions aligning with farmers' preferences.

Selected publication

- iLandscape project, CIAT, 2023, "Long-term economic viability of different coffee intercropping systems in the central highlands of Vietnam".
- Master's thesis, University of Adelaide, 2020, "The impact of climate change on Robusta coffee farmers in the Central Highlands of Vietnam: A cost-benefit analysis" (Notes: Best research prize).
